Test Report

Test Name	Results	Units	Bio. Ref. Interval
COMPLETE BLOOD COUNT (CBC), WHOLE BLOOD (SLS Method, Sheath Flow DC Detection Method, Fluorescent Flow Cytometry & Calculated)			
Hemoglobin	14.60	g/dL	13.00 - 17.00
Packed Cell Volume (PCV)	46.30	%	40.00 - 50.00
RBC Count	5.04	mill/mm3	4.50 - 5.50
MCV	91.90	fL	83.00 - 101.00
Mentzer Index	18.2		
MCH	29.00	pg	27.00 - 32.00
MCHC	31.50	g/dL	31.50 - 34.50
Red Cell Distribution Width (RDW)	13.60	%	11.60 - 14.00
Total Leukocyte Count (TLC)	9.88	thou/mm3	4.00 - 10.00
Differential Leucocyte Count (DLC)			
Segmented Neutrophils	61.90	%	40.00 - 80.00
Lymphocytes	24.70	%	20.00 - 40.00
Monocytes	2.50	%	2.00 - 10.00
Eosinophils	**10.50**	%	1.00 - 6.00
Basophils	0.40	%	<2.00
Absolute Leucocyte Count			
Neutrophils	6.12	thou/mm3	2.00 - 7.00
Lymphocytes	2.44	thou/mm3	1.00 - 3.00
Monocytes	0.25	thou/mm3	0.20 - 1.00
Eosinophils	**1.04**	thou/mm3	0.02 - 0.50

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.

Test Report

Test Name	Results	Units	Bio. Ref. Interval
Basophils	0.04	thou/mm3	0.02 - 0.10
Platelet Count	173	thou/mm3	150.00 - 410.00
Mean Platelet Volume	**12.6**	fL	6.5 - 12.0

Comment

In anaemic conditions Mentzer index is used to differentiate Iron Deficiency Anaemia from Beta- Thalassemia trait. If Mentzer Index value is >13, there is probability of Iron Deficiency Anaemia. A value <13 indicates likelihood of Beta- Thalassemia trait and Hb HPLC is advised to rule out the Thalassemia trait.

Note

1. As per the recommendation of International council for Standardization in Hematology, the differential leucocyte counts are additionally being reported as absolute numbers of each cell in per unit volume of blood
2. Test conducted on EDTA whole blood

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.

Test Report

Test Name	Results	Bio. Ref. Interval
WIDAL SLIDE AGGLUTINATION TEST, SERUM (Slide Agglutination)		
Salmonella typhi O (TO)	**Reactive upto Titre 1:40**	Non-Reactive
Salmonella typhi H (TH)	**Reactive upto Titre 1:40**	Non-Reactive
Salmonella paratyphi A H (AH)	Non Reactive	Non-Reactive
Salmonella paratyphi B H (BH)	Non Reactive	Non-Reactive

Interpretation

RESULT	REMARKS
Reactive	Indicates presence of IgM & IgG antibodies against Salmonella spp.
Non-Reactive	Indicates absence of IgM & IgG antibodies against Salmonella spp.

Note:

1. Titres ≥1:80 of “O” antigen & ≥1:160 of “H” antigen for Salmonella typhi and titres ≥1:80 of “H” antigen for Salmonella paratyphi A & B are significant.
2. Rising titres in paired samples taken 7-10 days apart are more significant than a single test.
3. Reactive results indicates ongoing or recent infection by Salmonella spp. and the diagnosis should be confirmed by gold standard test such as Blood culture prior to start of antibiotics.
4. The reactivity will vary with stage of the disease with appearance in 1st week to increase in titres till end of 4th week post which it starts decreasing.
5. In TAB vaccinated patients, high titres of H antibody of ≥1:160 to each of Salmonellae is observed. They tend to persist for many months and even years while O antibody shows lower titres and disappears within 6 months.
6. Antibiotic treatment during 1st week before the appearance of antibodies tend to supress the immune response in the form of no or decreasing antibody levels.
7. False positive results/anamnestic response may be seen in patients with past enteric infection during unrelated fevers like Malaria, Influenzae etc. in the form of transient rise in H antibody in Widal test.
8. False negative results may be due to processing of sample collected early in the course of disease (1st week) and immunosuppression.
9. Test conducted on serum.

Uses

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.

Test Report

Test Name	Results	Bio. Ref. Interval

- To diagnose infection due to Salmonella spp. (Enteric fever).
- To monitor the progression of disease.
- To assess the response to therapy (decreasing titres) in patients being treated for Enteric fever.
